

# 300 Watt Ariel Square Four Alternators

A fully regulated car style alternator for the later alloy engine variants of the Ariel Square Four (Mk1, MK2). This unit fits in place of the original equipment Lucas dynamo without any modification to the standard Ariel engine castings or frame. It incorporates the original dynamo end cap and at a glance the bike appears standard.

Based on the internal components from a bullet proof Kawasaki alternator (Nippon Denso) a full 300watts of output are available at 12v. The solid state regulator is contained within the body of the alternator and connection is via 2 wires which are brought out through the original Lucas end cap.

Fitting the alternator and carrying out simple modifications to the wiring loom are easily completed in a day. Full fitting and wiring instructions are supplied.

- 300w Output (25A @ 12v)
- 3 Phase AC with built in regulator/rectifier
- No modification to engine castings
- High quality CNC machined components
